

Task 1

TLHT interpret negative numbers in context, with counting forwards and backwards

Negative numbers in context

There are many real life situations which use negative numbers.

For example,

- Temperature

- Bank balances

Balance -£34.52

- Measurements taken below sea level

- Games with negative scores.

<https://mathsframe.co.uk/en/resources/resource/89/itp-thermometer>

TLHT interpret negative numbers in context, with counting forwards and backwards

Positive and negative integers can be shown on a number line.

What do you notice?

Can you count forwards and backwards?

TLHT interpret negative numbers in context, with counting forwards and backwards

We can also use a number line to help us write integers in order.

Write the integers -2 , 8 , 2 , -6 , -9 and 5 in order from smallest to largest.

Look at the position of the integers on the number line:

Can you order them from smallest to biggest?

Let's plot them to see which is the smallest!
This will help us order them smallest to biggest.

TLHT interpret negative numbers in context, with counting forwards and backwards

We can also use a number line to help us write integers in order.

Write the integers -2 , 8 , 2 , -6 , -9 and 5 in order from smallest to largest.

Look at the position of the integers on the number line:

ANSWERS

From smallest to largest:

-9 -6 -2 2 5 8

a) What is the **difference** between 3 and -4 ?

(to work out difference, count the jumps in between)

b) The temperature was -2 and it rose by 7 degrees, what was the new temperature?

(if something 'rose' it would go up)

ANSWERS

a) What is the **difference** between 3 and -4?

The difference is 7.

b) The temperature was -2 and it rose by 7 degrees, what was the new temperature?

The new temperature would be 5 degrees.

Make sure you have cubes or draw a number line.

The table shows the temperature of different cities on one day in **November**.

Estonia	Iceland	London	Canada	Moscow
- 8° C	-12°C	4 C°	- 10°C	- 12°C

The temperature goes up in Estonia by 5 degrees. What is the temperature now? _____

The temperature goes down in Moscow by 7 degrees. What is the temperature now? _____

The temperature goes up in Iceland by 11 degrees. What is the temperature now? _____

The temperature goes up in London by 5 degrees. What is the temperature now? _____

The temperature goes down in Canada by 6 degrees. What is the temperature now? _____

Which cities are below freezing in November?

ANSWERS

5

The table shows the temperature of different cities on one day in November.

Estonia	Iceland	London	Canada	Moscow
- 8° C	-12°C	4 C°	- 10°C	- 12°C

The temperature goes up in Estonia by 5 degrees. What is the temperature now? -3 degrees

The temperature goes down in Moscow by 7 degrees. What is the temperature now? -19 degrees

The temperature goes up in Iceland by 11 degrees. What is the temperature now? -1 degrees

The temperature goes up in London by 5 degrees. What is the temperature now? 9 degrees

The temperature goes down in Canada by 6 degrees. What is the temperature now? -16 degrees

Which cities are below freezing in November? Estonia, Iceland, Canada, Moscow

Look through the steps to see how you can work this out.

- 1) get to zero
- 2) work out what is left to take away
- 3) subtract that

The rainforest has a temperature of 35 degrees.
 The arctic has a temperature of -24 degrees.
 Show the difference in temperature on a number line

Can you have a go?
 Draw a line and place the
 desert and Antartica on there!
 Use the steps to work out the
 difference.

- 1) get to zero
- 2) work out what is left to take away
- 3) subtract that

The desert has a tempertaure of 42 degrees.
 Antarctica has a temeperature of -18 degrees.
 Show the difference in temperature on a number line

Can you have a go?
 Draw a line and place the
 desert and Antartica on there!
 Use the steps to work out the
 difference.

- 1) get to zero
- 2) work out what is left to take away
- 3) subtract that

The desert has a tempertaure of 42 degrees.
 Antarctica has a temeperature of -18 degrees.
 Show the difference in temperature on a number line
ANSWER: 42 JUMPS ADD 18 JUMPS= 60
